

WCMS DOMAIN ONTOLOGY V1.1

RELEASE NOTES

MONDAY, 17 JUNE 2013

1. UPDATES / CHANGES SUMMARY

1.1 ONTOLOGY IMPORTS

- FOAF re-imported into WCMS Domain Ontology as Agent subclasses. It was not correctly rendered in V1.0.

1.2 PROPERTY CHANGES

- All properties with Range Group, Person or Organisation changed to Range Agent.
- All properties 'hasAssociated' properties changed to 'hasRelated' to fit in with 'relation' definition, and eliminate ambiguities/overlaps between the two terms.

1.3 NEW PROPERTIES

- 'brandHasRelatedMedia', Domain Brand, Range Media Item, to accommodate campaign requirements in WCMS Domain Model requirements.
- 'img', Domain Person, Range Image Object, to accommodate person image (FOAF property).
- Properties associated with Schedule and Schedule Event.

1.4 NEW CLASSES

- New Collection Class defined as 'An aggregation of Media Items'.
- New Collection Subclasses created for Ordered Collection and Unordered Collection.
- New Schedule Class defined as 'A series of schedule events that are associated with one service.'
- New Schedule Event class defined as 'A schedule event (service, time and duration) that can be associated with a given program.'

1.5 DEPRECATED CLASS

- DataCatalog Class subsumed by more broadly defined Collection Class.

1.6 ANNOTATIONS

- rdfComment, with definition/scope note and referenced source (as appropriate) added for each Class and Property.
